DATA ENGINEERING

(field of study, first-cycle, engineer degree, full-time)

Graduate profile:

Data Engineering graduates will have opportunities to find employment in institutions and companies specializing in data acquisition and processing or data protection (such as statistics/accounting offices, various businesses, universities, research laboratories, software development companies), at positions requiring fluent practical skills in data analysis.

The received degree entitles to apply for admission to second-degree studies in the given or related field of science and any higher-education institution, as well as to enlist into postgraduate courses.

The basic offer for continuation at UJK for Data Engineering graduates are the second-degree studies in mathematics (Data Analysis) and physics (Medical Physics, Nanotechnologies).
